

HOW TO READ YOUR METER

1. Lift the plastic rectangular meter box lid being careful not to pull the antenna cable loose.
2. Flip up the small round lid of the meter register.
3. Allow the solar cell to have exposure to sunlight or shine a bright flashlight on the solar cell.
4. The digital display will turn on and show the current reading and consumption messages.
5. For a residential water meter, read only the first four digits from the left.
6. Subtract your previous reading from your new reading to obtain your consumption in thousands of gallons.

Expose the solar cell to sunlight or use a flashlight.

Leak indicator.

Only read the first four digits.
